## L750

### Proportional Flow Control

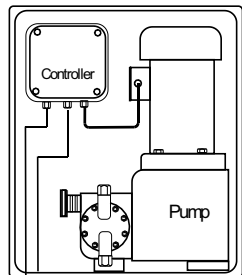

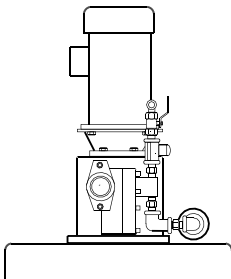

### Application

Parks & Landscapes  
Turfgrass

Spray / Rotors

### Area coverage

10 to 50 acres

**L750 Series - Proportional Rate Injector** for parks and landscapes from 10 to 50 acres.

## *Landscape Series*

The importance of green parks and landscapes is realized today in our communities and cities as green assets of the community. Fertigation offers the managers a simple method to feed through the irrigation system and irrigate with Fertile Water™ and produce a healthy plant. Fertigation will reduce labor, save water and give you a quality landscape.

The Landscape Series offers seven models to satisfy areas from one to over 100 acres. The pumps can be installed indoors or in an outdoor lockable enclosure, with tank installation above or underground.

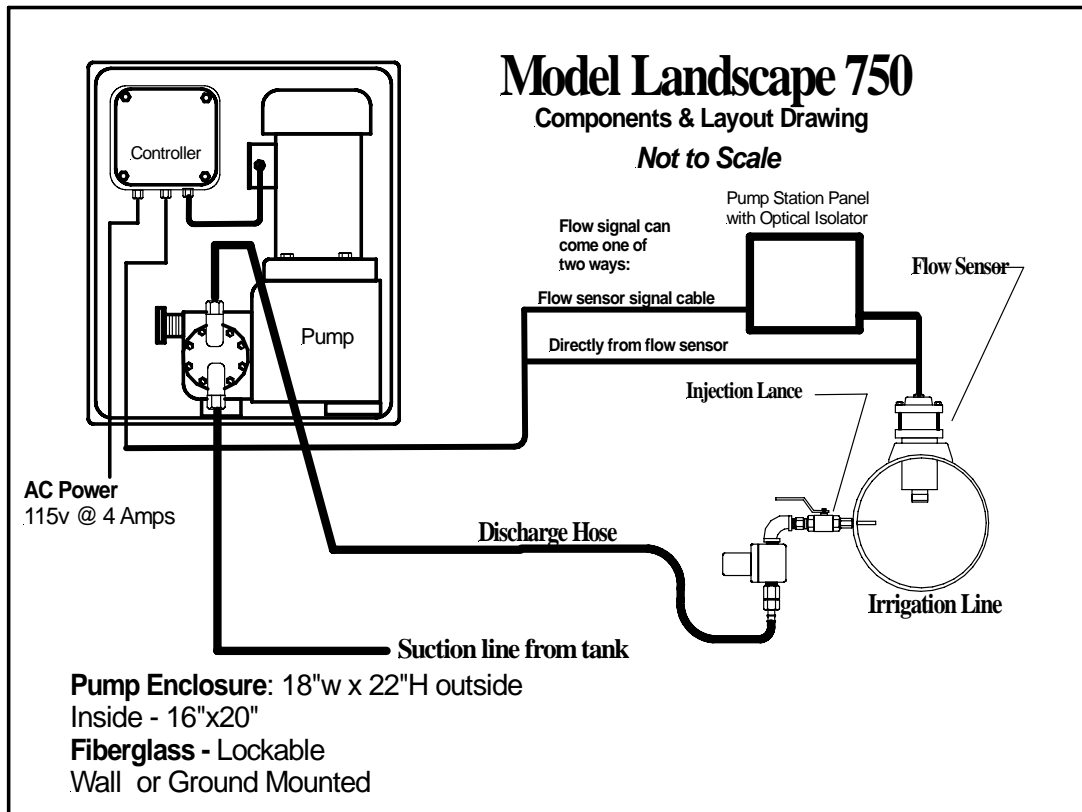

*(See Specifications on the back page )*

**Turf Feeding Systems - (800) 728-4504**

# Landscape 750 Series

This proportional fertigation system is controlled by water flow, with a flow sensor installed in the irrigation line. The pump capacity is determined by the irrigated area as is the size of the storage tank.

**\*\* Note:** The tank size is determined using approximately 10 gal. per acre as a number. Example: A 3 acre area would use a 30 gal tank.

---

## Specifications:

### Variable Speed Motor Driven Diaphragm Metering Pump

Capacity: (1) 10 gph @150psi head  
Adjustable: 0-100% by stroke knob  
Stainless steel (316) pump head and valves  
Built in pressure relief  
Oil bath gear drive  
Fiberglass pump base floor mounted  
(Dimensions: 16"x18"x10")

### Proportional Controls by (Flow Rate)

Insertion type: Data Industrial flow sensor or optical isolation  
Variable Speed Control: SCR DC Drive

### All Installation / Operation Hardware

Anti-Siphon included for each head  
System comes complete with all needed fittings, lines, and hardware less tanks.
