

Professional Grade Fertigation™

Sports Turf

L750

Proportional Flow Control

Application

Sports Turf Complex
Turfgrass

Spray / Rotors

Area coverage

10 to 50 acres

L750 Series - Proportional Rate Injector for the big sports complex from 10 to over 50 acres.

Sports Turf Series

Sport fields are important turfgrass areas faced with heavy use with increased popularity and demand. The biggest issues in field management are field recovery from heavy use and water conservation. Both issues are addressed with fertigation.

Fertigation delivers fast labor free recovery from field damage by simply increasing the fertigation rate and pushing the plant growth then returning to the maintenance setting. Field management is simple by adding fertigation to convert ordinary irrigation water into **Fertile Water™** the most efficient way to irrigate and fertilize.

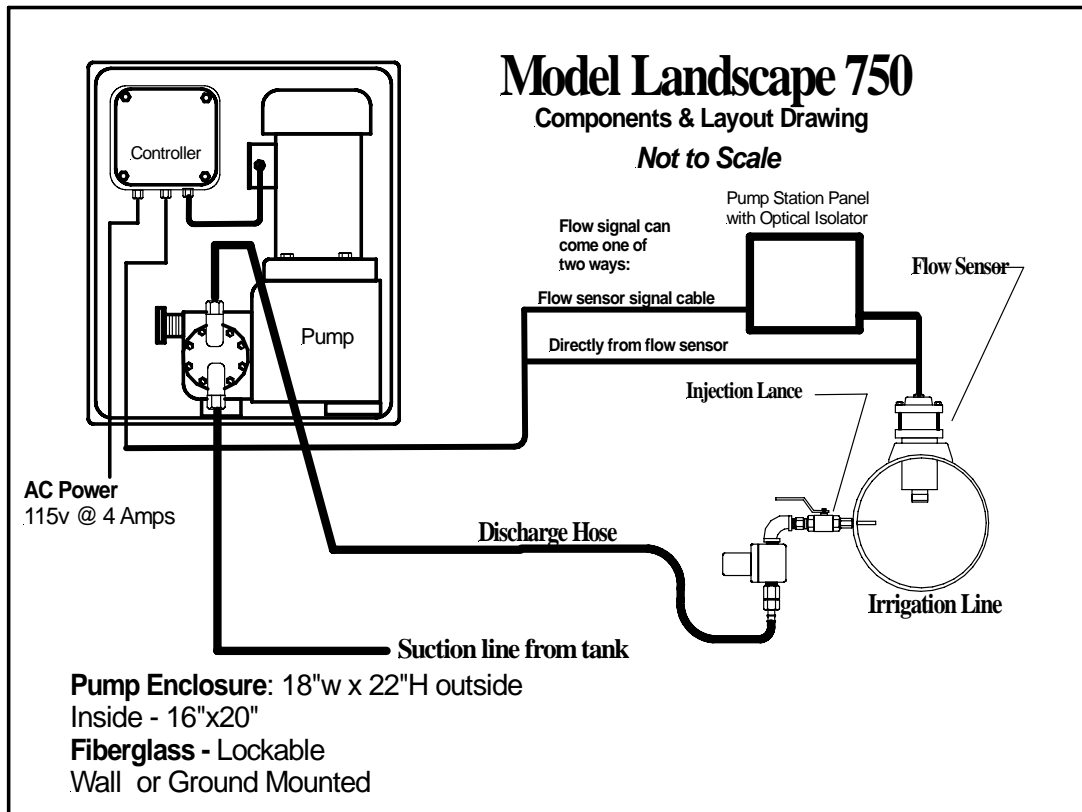

Plant and soil health is the key to water conservation, and fertigation delivers that advantage.

Turf Feeding Systems - (800) 728-4504

Sports Turf 750 Series

This proportional fertigation system is controlled by water flow, with a flow sensor installed in the irrigation line. The pump capacity is determined by the irrigated area as is the size of the storage tank.

**** Note:** The tank size is determined using approximately 10 gal. per acre as a number. Example: A 3 acre area would use a 30 gal tank.

Specifications:

Variable Speed Motor Driven Diaphragm Metering Pump

Capacity: (1) 10 gph @150psi head
Adjustable: 0-100% by stroke knob
Stainless steel (316) pump head and valves
Built in pressure relief
Oil bath gear drive
Fiberglass pump base floor mounted
(Dimensions: 16"x18"x10")

Proportional Controls by (Flow Rate)

Insertion type: Data Industrial flow sensor or optical isolation
Variable Speed Control: SCR DC Drive

All Installation / Operation Hardware

Anti-Siphon included for each head
System comes complete with all needed fittings, lines, and hardware less tanks.
